

Stocks (Inventory) Maintenance System.

Problem Statement:

The stocks maintenance system must keep track of all the incoming and outgoing goods. The system must store the different types of goods available and their quantities.

Introduction:

Stock maintenance is an interface between the customer and the sales person. It helps in improving the efficiency in maintaining the stocks.

Purpose:

To automate the process of keeping track of the stock.

Scope:

- Provides a communication platform between the customer and sales person.
- Customer can place orders and the sales person issues the items.

User characteristics

- Customer: Places orders
- Validate customer: Customer & the order is validated
- Sales Detail: Maintains stock details after delivering the items.
